Current App Screens and Layout

Note to the AI developer: The screenshots in this document show the **current state of the application as it is currently being built**. They are provided for inspection and comparison against the original design mockups and implementation instructions in the project files.

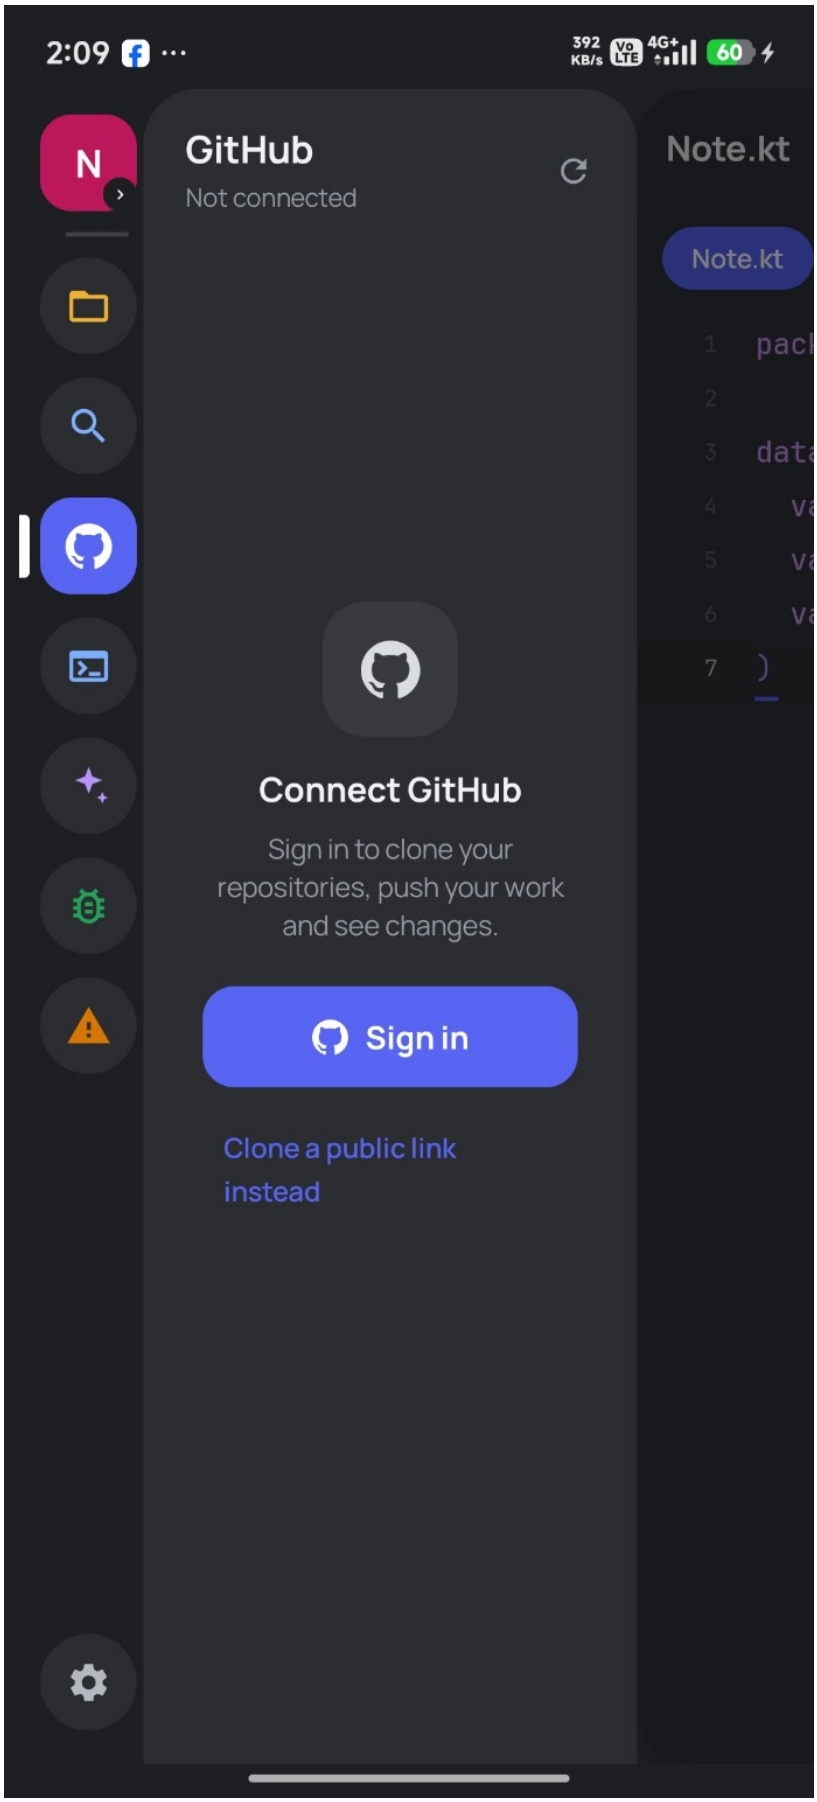

These images are examples of the current implementation, not the approved target design. Please identify where the current UI, layout, icons, spacing, navigation, and behaviour differ from the original PDF mockups, and correct the implementation to match those original specifications.

Only five screenshots could be included here because of the upload limit. They do not represent every screen or issue in the application. Please inspect the rest of the app and compare all screens against the original project mockups and supplied Kotlin code. Do not assume that screens not shown here are correct.

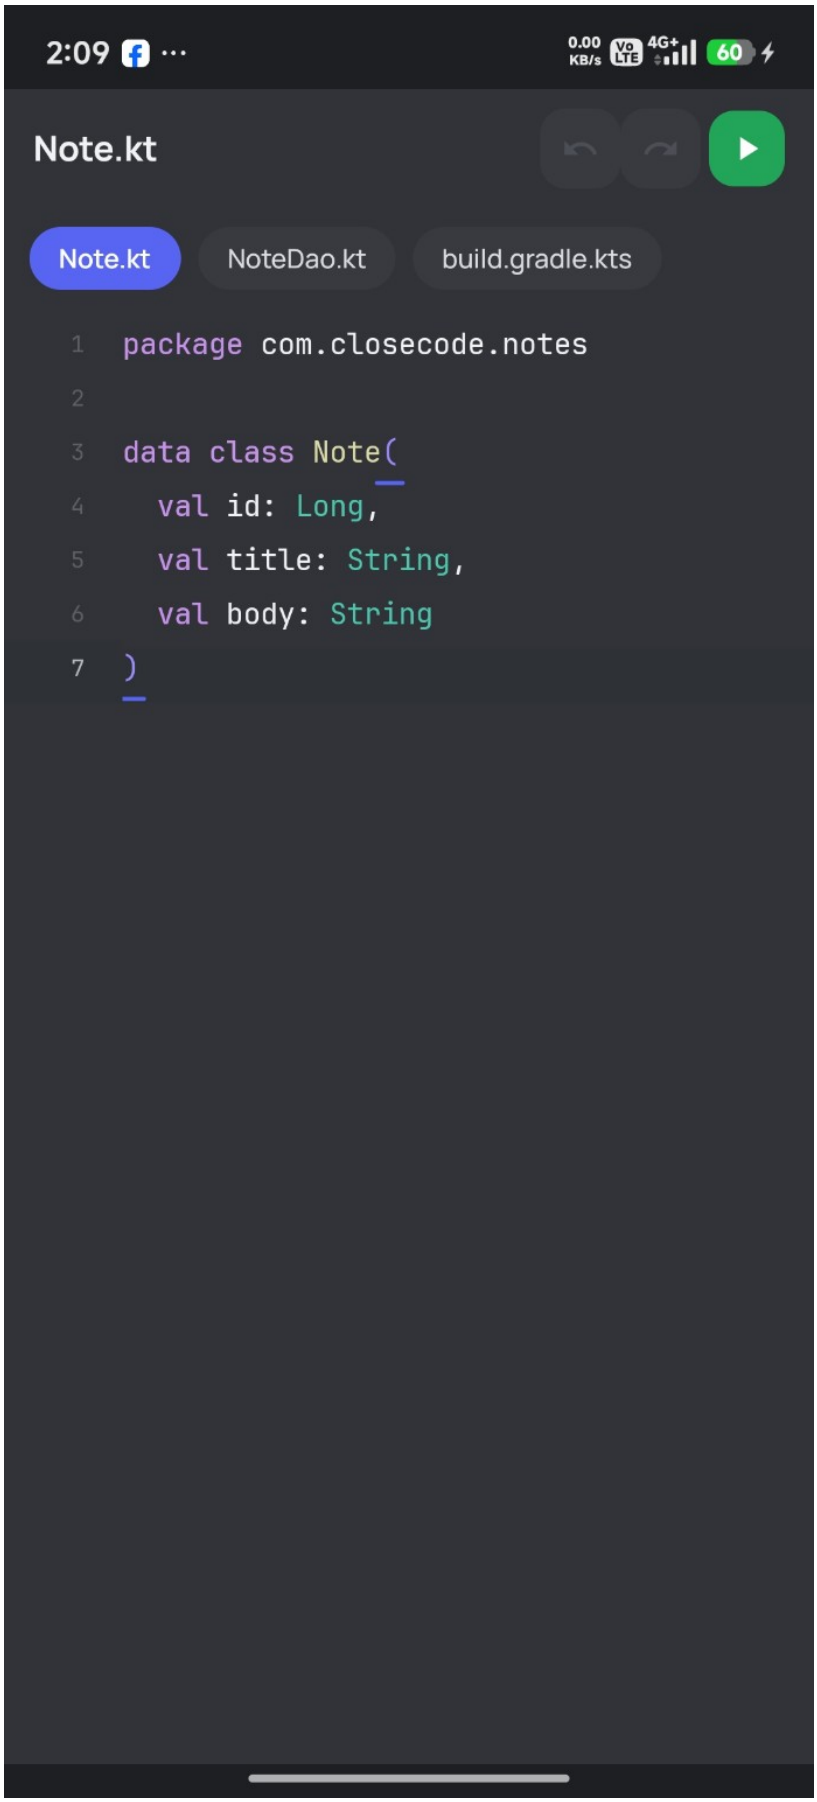

Screenshots of the current implementation

Each following page contains one of the screenshots supplied by the user, kept in its original proportions.

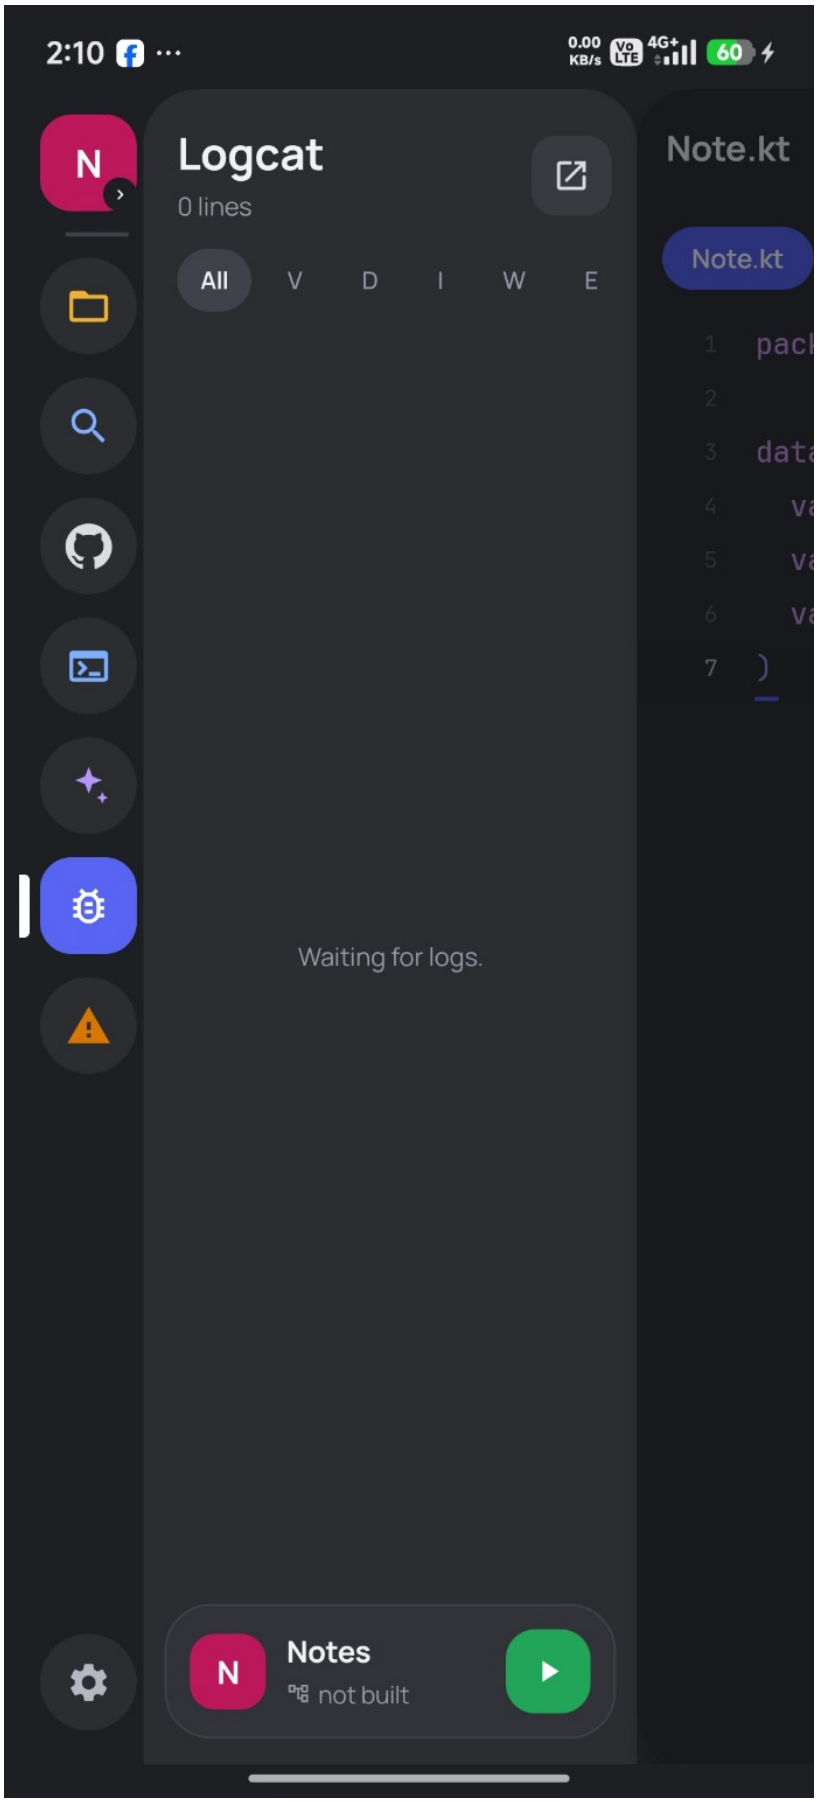

Screenshot 1 — GitHub panel showing “Not connected”

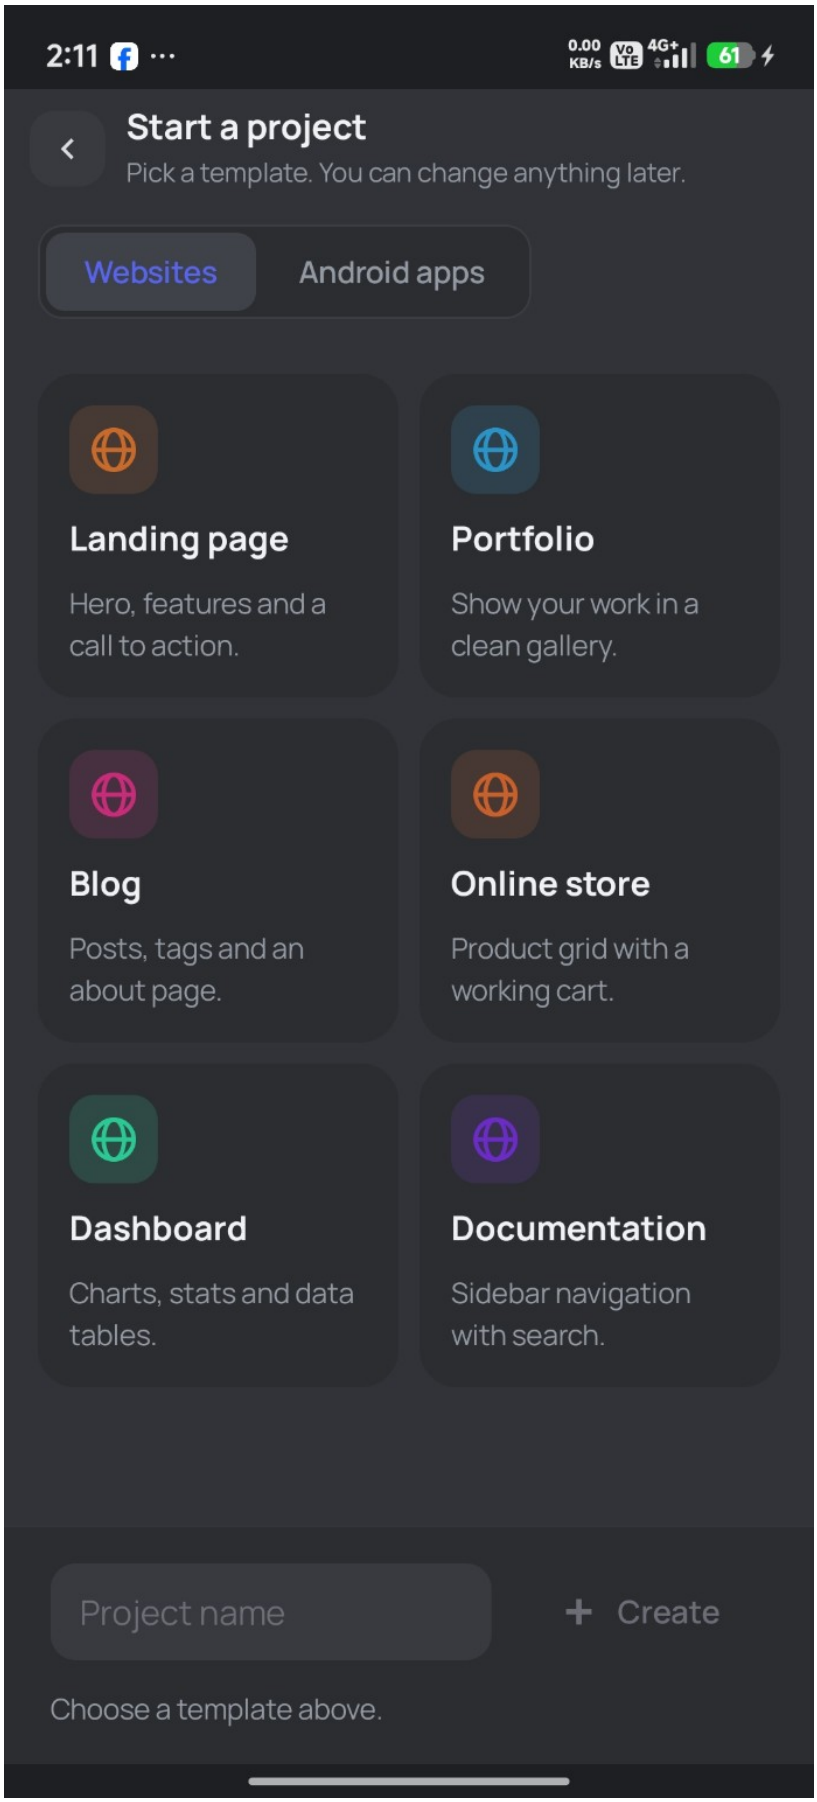

Screenshot 2 — Note.kt code editor screen

Screenshot 3 — Logcat panel showing “Waiting for logs”

Screenshot 4 — Start a project template selection screen

Screenshot 5 — Start a project screen with Landing page selected
